

Package ‘EasyRules’

May 2, 2026

Title Simple Tools for Transaction Data and Association Rules

Version 0.0.0.9000

Author Veronica Vaccaro

Maintainer Veronica Vaccaro <veronicavaccaro@usf.edu>

Description Provides beginner-friendly functions for working with transaction data and association rules. The package helps users load example transaction data, summarize item frequencies, create association rules, and visualize results using simple R functions.

Depends R (>= 3.1.2)

generate_rules	1
item_frequency	2
load_transactions	2

generate_rules	<i>Generate association rules Creates association rules using the apriori algorithm.</i>
----------------	--

Description

Generate association rules Creates association rules using the apriori algorithm.

Usage

```
generate_rules(transactions, support = 0.1, confidence = 0.5)
```

Arguments

transactions	A transactions object.
support	Minimum support value.
confidence	Minimum confidence value.

Value

A set of association rules.

item_frequency	<i>Get item frequencies Calculates the frequency of items in transactions.</i>
----------------	--

Description

Get item frequencies Calculates the frequency of items in transactions.

Usage

```
item_frequency(transactions)
```

Arguments

transactions	A transactions object.
--------------	------------------------

Value

A numeric vector of item frequencies.

load_transactions	<i>Load transaction data Converts a dataset into transactions format.</i>
-------------------	---

Description

Load transaction data Converts a dataset into transactions format.

Usage

```
load_transactions(data)
```

Arguments

data	A dataset to be converted.
------	----------------------------

Value

A transactions object.
